TOMEY FULLY AUTOMATED FUNDUS CAMERA TFC-1000

QUALITY IN DETAIL

The **TFC-1000** fully automatically generates a fundus image within 15 seconds using eye tracking and auto focus as well as auto measurement. The "KISS principle" (keep it short and simple) had the highest priority in the software and workflow design. This makes the operation of the **TFC-1000** extremely easy to handle. The user-friendly interface is very intuitive and provides the results in a very short time.

MULTI IMAGING DISPLAY

With 9 fixation points we enlarge the field of vision (FOV) of the retinal image. For multi imaging you have the possibility to select 3 of 9 points. The FOV will extend from 45° to 80°.
